We live in a constantly changing world where technology is advancing at an accelerated pace. We are faced with stiff competition in which the analysis of great data volumes, the internet of things, artificial intelligence, cloud solutions, machine learning and cybersecurity, among other factors, have already become active agents called upon to drive company competitiveness.

Throughout our more than 45 years of activity, we have managed to develop a deep knowledge and specialization in our clients’ business fields & sectors. This is a key factor in helping us to understand company needs in this new scenario, in which we have supported them in their digital disruption and operational efficiency processes.

Our business knowledge is reflected in applied technological innovation that seeks to simplify the complex, giving rise to competitive advantages for our clients which enables their ongoing improvement.

We cordially invite you to get to know our Smart Experience.

Iñaki Maiz,
Managing Director
IKUSI IS PART OF VELATIA

Velatia is an industrial and technological group conducting its activity in the world of power grids, electronics and communications networks, as well as in the sectors of consultancy, security and aeronautics, where safety, effectiveness and reliability are valued.

OUR DNA

Technological engineering & development for business digital transformation

We drive our clients’ competitive advantage in their sectors, establishing long-term relationships with real transformation in mind.

We lead market niches in a continuously changing and evolving scenario, where foresight and flexibility are fundamental driving forces in businesses and organizations.
We rely on our experience and knowledge to launch ourselves into the future and bring added value to our clients.

We are pro-active in the digital transformation of our clients. We want to be their business partners. Our proposal: to resolve in-house complexity so that the market can profit from the “simplicity” of our solutions.

We offer our clients technology-based services to enable them to develop competitive advantages, to drive them in their different spheres of activity. Services and solutions that progressively incorporate data analysis, IoT, artificial intelligence, cloud technology, machine learning, data lakes, etc., concepts that form part of digital economics.

At Ikusi, we are experts in three areas, which when put together, provide us with a competitive advantage.

- Sector knowledge
- Integration capacity
- Technical knowledge
**SPHERES OF ACTIVITY**

**Integration and Engineering Projects**

Knowledge to evolve

Business knowledge aimed at transforming companies.

Solutions to evolve

Specialized business applications oriented towards the digital transformation of different sectors.

Technology to evolve

Design, implementation and administration of telecommunications technology and infrastructures.

Manufacturing to evolve

Design and manufacture of electronic components and associated services.

**Specialized Business Solutions**

**IT and Telecommunications Networks**

**Advanced Electronics Technology**
INTEGRATION AND ENGINEERING PROJECTS

We collaborate with leading Technological Partners in their sectors of activity.

We provide complex turnkey integration project design, engineering and development for different spheres of activity where speed and flexibility are key factors in driving businesses and organizations.

We are oriented to improving competitiveness and innovation of our clients, thanks to our deep business knowledge developed over the last 45 years.

We provide our clients integrated information for improved services and experiences, developing intelligence through information and data use & management as a principal digital ecosystem asset.

Professional services:
> Support services in operation.
> Project engineering services.

SECTORS AND AREAS OF SPECIALIZATION

CITIES
Design and projects for sustainable Smart Cities

MOBILITY
Overland Mobility optimization

PORTS
Efficiency in Port enclosure management through traffic flow and access control

AIRPORTS
Efficiency and innovation in Airport operations

SECURITY
Integrated security management and operation in keeping with the real and future needs of every infrastructure

ENERGY
Applied technology to transform the Energy business

INDUSTRY 4.0
Innovation in processes oriented towards data-based operational excellence

WE PROVIDE INTEGRATION AND ENGINEERING PROJECTS

We collaborate with leading Technological Partners in their sectors of activity.

We provide complex turnkey integration project design, engineering and development for different spheres of activity where speed and flexibility are key factors in driving businesses and organizations.

We are oriented to improving competitiveness and innovation of our clients, thanks to our deep business knowledge developed over the last 45 years.

We provide our clients integrated information for improved services and experiences, developing intelligence through information and data use & management as a principal digital ecosystem asset.

Professional services:
> Support services in operation.
> Project engineering services.
Business knowledge oriented towards the digital transformation of different sectors

We create specialized business applications focused on improving operational efficiency, income and user experience through the use of advanced technologies for the digital transformation that is occurring in all sectors.

We believe in combining business and technology from the viewpoint of flexibility, speed and prediction, which are vital to providing technology that will endow companies with present-day competitive advantage and future projection.

We provide solutions and applications in four areas: Security, Operations, Sales and Digital Transformation Office.
We design, implement and administer telecommunications technology and infrastructures, contributing our knowledge and experience to different sectors such as telecommunications operators, the business market and government, in fields with specific requirements.

We provide innovative alternatives for technological architectures, aiming to offer our clients the tools required for market leadership through integrated business solutions backed by our renowned business experience, technical knowledge and best industry practices.

We specialize in providing infrastructures for cloud and data center solutions, cybersecurity, networks and telecommunications, as well as integrated management services through Ikusi ONCE, our operations and intelligence center, to create a business experience.
We design and manufacture electronic components and provide the associated services for different sectors and business lines.

Ikusi Remote Control is an acknowledged designer and manufacturer of electronic systems based on radio connections for the remote control of industrial machinery in diverse applications.

Ikusi Multimedia specializes in high-quality TV and video signal processing equipment. It designs and manufactures electronic processing equipment for configuring TV headends or signal distribution centers in any standard, account taken of client needs, while maintaining the highest levels of quality, solidity and reliability.

Ikusi Electronics supplies products and electronic manufacturing services to original equipment manufacturers from different sectors.
