IKUSI CYBERSECURITY

We anticipate risks.
We protect your operations.

Specialized cyber defense,
protection without limits.

IKUSI velatia

invisible technology,
visible transformation

Digital transformation has expanded the attack surface

The adoption of cloud, hybrid work, connected devices, and distributed applications has transformed the way organizations operate. At the same time, it has increased exposure points and the complexity of protecting the business.

Every new connection represents a new opportunity for an attack.

IKUSI CIBERSECURITY

Cybersecurity no longer just protects systems.

Today, it protects business continuity.

What does Ikusi offer?

Design Implementation Operations Optimization Evolution

Cybersecurity

We design, implement, and operate comprehensive strategies that strengthen resilience, reduce risk, and protect business operations.

Our value proposition

Comprehensive protection: Security for identities, networks, data, cloud, and critical environments.

Continuous visibility: Ongoing monitoring and analysis to detect threats in a timely manner.

Specialized response: Incident containment and recovery capabilities.

Operational resilience: Protecting business continuity against cyber risks.

Managed operations: Specialized services backed by Ikusi's C-SOC.

Cybersecurity Solutions Portfolio

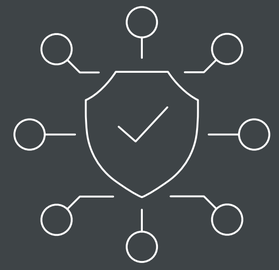

Operational Security
(Automated SecOps)

Incident Response

Risk Management

Cyber Intelligence

Ikusi's cybersecurity services portfolio is designed to deliver specialized solutions organized into four domains that strengthen visibility, protection, response capabilities, and business continuity.

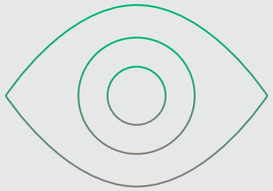

Operational Security

Ensure the availability and resilience of your critical assets (IT, OT, and IoT) through specialized 24/7 monitoring from our C-SOC. We detect, analyze, and manage security events in real time, ensuring optimal detection and response times.

Ikusi becomes an extension of your operations, managing the technical complexity of cybersecurity while your organization focuses on its core business.

Operational Security

IKUSI CIBERSECURITY

Security Protect

24/7/365 cybersecurity monitoring and management from Ikusi's C-SOC, with continuous visibility, specialized support, and a focus on risk reduction, regulatory compliance, and operational continuity.

Cloud Protect

Security for hybrid cloud environments with continuous visibility, data protection, risk management, and compliance with standards such as ISO, PCI, and NIST.

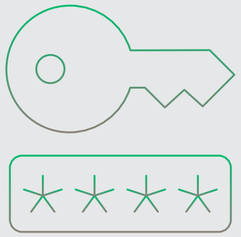

Data Protect

Protects critical applications, identities, and digital channels through access control, API security, and protection against advanced threats. Provides visibility and adaptive control to safeguard sensitive information and support compliance with data protection regulations.

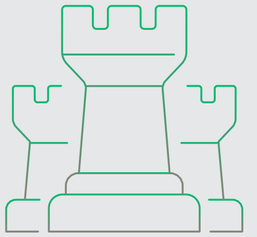

Threat Protect

Strengthens operational security through specialized 24/7/365 monitoring from the C-SOC, threat detection, and risk prioritization. Protects hybrid work environments, critical infrastructure, and cloud and on-premises resources, ensuring operational continuity.

Workforce Password Management

Centralizes and protects access to corporate applications and services through secure management of identities, credentials, and privileged access. Reduces the attack surface, strengthens remote-work security, and supports compliance with audits and access controls.

Industrial Protect

Strengthens the security and availability of industrial environments through continuous monitoring, detection of unauthorized access, and protection of critical OT/IoT infrastructure. Enables large-scale device management, protection of legacy systems, and secure segmentation of IT and operational networks.

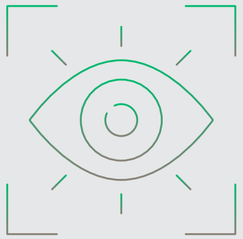

Incident Response

Reduce the operational and financial impact of advanced threats. Our specialized team activates containment, analysis, and recovery protocols to minimize disruptions, fraud, and reputational damage.

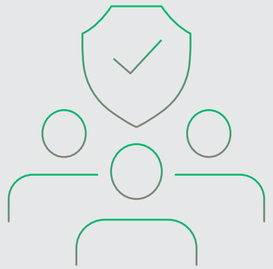

Using proven methodologies and crisis-management expertise, we ensure a fast, structured response aligned with international best practices.

Incident Response

Cybersecurity for End Users - Endpoint Protection / Threat Protect

Detects and contains active threats through advanced prevention, behavioral analysis, and incident investigation capabilities. Enables rapid response to attacks, minimizes operational and financial impact, and continuously strengthens the organization's security posture.

Cyber Risk Prevention for Organizational Assets / Security Protect

Security Protect centralizes incident response and threat containment, providing visibility into the origin, scope, and impact of attacks. It facilitates evidence collection, accelerates service recovery, and strengthens organizational resilience to prevent recurring incidents.

Risk Management

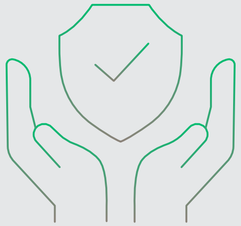

Turn technical information into strategic business visibility.

We analyze vulnerabilities and exposure surfaces across IT, cloud, Active Directory, and OT/IoT environments, identifying potential attack paths and prioritizing actions based on their actual impact.

We support executive decision-making through a clear interpretation of risk aligned with frameworks such as NIST and applicable regulations.

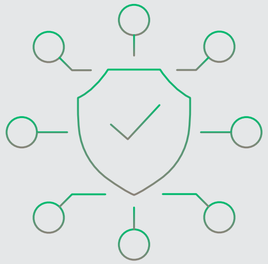

Risk Management

IKUSI CIBERSECURITY

Cyber Risk Prevention for Organizational Assets / Security Protect

Provides visibility into cyber risk by identifying vulnerabilities, assessing their potential impact, and prioritizing critical assets. Supports strategic decision-making, strengthens regulatory compliance, and improves organizational resilience through effective attack-surface management.

Cybersecurity for End Users - Endpoint Protection / Threat Protect

Identifies and manages the exposure of Internet-connected assets through continuous vulnerability monitoring and attack-surface analysis. Enables risk prioritization, focuses security investments, and strengthens resilience against advanced threats.

Industrial Security in IT & OT Environments / Industrial Protect

Provides visibility and early threat detection in industrial OT environments by identifying unauthorized access and operational risks. Helps protect control systems and critical assets, strengthening operational continuity and alignment with international security standards.

IKUSI CIBERSECURITY

Cyber Intelligence

Gain early visibility into external risks before they impact your organization.

We monitor brand exposure, phishing campaigns, credential leaks, third-party risks, and activity across open and specialized environments.

This operational extension helps anticipate threats, protect digital reputation, and strengthen the security posture beyond the internal perimeter.

Cyber Intelligence

Cyber Patrol and Cyberattack Prevention / Intelligence Protect

Proactively monitors the surface, deep, and dark web to identify external threats, phishing campaigns, credential leaks, and third-party risks. Provides actionable intelligence to protect the brand, reduce risk exposure, and prevent incidents before they impact the organization.

Cyber Risk Prevention for Organizational Assets / Security Protect

Integrates global threat intelligence to identify emerging risks, anticipate attacks, and prioritize defensive actions. Correlates events with real-time, up-to-date information, providing actionable context to protect critical assets and strengthen security response.

IKUSI CIBERSECURITY

Business Impact

- Reduced exposure to cyberattacks
- Greater response capabilities
- Ensured operational continuity
- Regulatory compliance
- Customer and partner trust

Why Ikusi?

- Strategic approach to cybersecurity
- Specialized 24/7 operations
- Integration with the business
- Cross-industry experience
- Continuous evolution in response to emerging threats

In an environment where threats are constantly evolving, organizations that can anticipate, adapt, and respond quickly are the ones that safeguard their continuity and growth.

Cybersecurity is no longer just a technology requirement; it is a strategic business decision.

At Ikusi

- We turn security into a business enabler.
- We measurably reduce risk exposure.
- We strengthen operational resilience.
- We protect your organization's most critical assets.
- We support our customers throughout the entire journey, from strategy definition to ongoing operations, ensuring their digital environment is always protected and ready for what comes next.

Specialized cyber defense,
protection without limits.
